

CLAIMS:

1. A valve assembly able to be mounted with a liquid container, the valve assembly comprising:
 - 5 a housing having a passageway that extends through the housing;
 - a breather float valve mounted within the housing, the breather float valve movable between an open position to allow gas to pass through the passageway and a closed position that prevents liquid from passing through the passageway;
 - 10 an liquid inlet, forming part of the housing, the liquid inlet allowing fluid to pass into the housing; and
 - an inlet float valve mounted within the housing, the inlet float valve movable between an open position that permits the flow of liquid through the liquid inlet and a closed position that prevents the flow of liquid through the liquid inlet.
- 15 2. The valve assembly of claim 1 wherein the valve assembly includes a relief valve that is movable between an open position and a closed position to allow pressure to be relieved from the container.
- 20 3. The valve assembly of claim 1 wherein the housing is cylindrical.
4. The valve assembly of claim 1 wherein inlet float valve includes a float and a stem.
5. The valve assembly of claim 4 wherein a valve seal is located adjacent the end of the stem.
- 25 6. The valve assembly of claim 5 wherein a fuel chamber is located adjacent the liquid inlet in which fuel is passed.
7. The valve assembly of claim 6 wherein a shelter is provided within the fuel chamber in which an end of the stem is located when the float valve assembly is in the open position.
- 30 8. The valve assembly of claim 1 wherein the breather float valve includes a rod and breather float.
9. The valves assembly of claim 8 wherein a spring engages the

breather float valve.

10. The valve assembly of claim 2 wherein the relief valve includes a relief plate, a spring and a cap.
